

Counting Women's Ballots

Estimates of turnout and vote choice for women and men

15 July 2017

J. Kevin Corder and Christina Wolbrecht

Using this data

Two datasets are available – a simple summary of the estimates and a larger dataset that includes 2,000 observations for each state and year. The larger dataset is required to replicate the confidence intervals in the figures.

Basic estimates [dataset name: **CWB_basic.dta**]

Each observation is a single state and election year. The dataset totals to 50 observations – 10 sample states observed in five presidential election years. The variable names and descriptions are below.

Estimates and measures of uncertainty [dataset name: **CWB_estimates.dta**]

Each observation is one sample from the Markov Chain Monte Carlo simulation used to generate the underlying estimates that were used to calculate the state-level quantities. Each state-election year has 2,000 observations - 2,000 samples from the simulation after the chain had converged. The total dataset is 2,000 x 10 x 5 or 100,000 observations. We used this dataset to produce figures with the average for the state and a 90% confidence interval. This dataset can be used to replicate all of the figures in Chapters 2 - 8 and several figures in Chapter 9.

If you do not need confidence intervals or measures of uncertainty, use the following command to collapse the dataset to a simple 50 observation data with the estimate for each state or download the basic estimates.

```
collapse (mean) pr* pd* po* mv fv, by (state state2 year region res party_rev n m f)
```

Note that in order to calculate a national average of turnout, you should weight using the total over 21 population (n), but to calculate a national average of party vote share, you should weigh using the total number of voters (v).

Variables	Description
state	state name
state2	2 letter state abbreviation
year	presidential election year (1920, 1924, 1928, 1932, 1936)
region	Census region (Midwest, Northeast, South/Border)
rest	Electoral laws (Residency requirement only, Additional suffrage restrictions)
party	Burnham party measure (one party GOP, one party DEM, competitive)
party_rev	Party measure for 1928 (one party GOP Northeast, one party GOP Midwest, one party DEM, competitive)
n	Number of people 21 and over
m	Number of men 21 and over
f	Number of women 21 and over
pr0	Republican share of vote, women
pr1	Republican share of vote, men
pd0	Democratic share of vote, women
pd1	Democratic share of vote, men
po0	Third (other) party share of vote, women
po1	Third (other) party share of vote, men
pt0	Turnout, women
pt1	Turnout, men
v	Number of voters (calculated mv and fv)
mv	Number of male voters, calculated from pt1 and m
fv	Number of female voters, calculated from pt0 and f
